Yellow Spot Resistance Trial, PHIL 2018 Series

- Date of Completion of Study: June 2023
- Date of Completion of Terminal Report: July 2023

Thirty clones of the Phil 2018 series were rated for resistance to yellow spot disease. The trial was conducted from July 2022 to July 2023. Natural method of infection was employed by planting diseased clones in between 2 rows of test clones. One (1) clone was found highly resistant, seven resistant and intermediate resistant, eight intermediate average, three intermediate susceptible, one susceptible and three highly susceptible to the disease.
