- Date of Completion of Study: March 2023
- Date of Completion of Terminal Report: April 2023

From 172 bi-parental crosses in the Phil 2020 Series Single Seedling Plot Test, six hundred sixty-seven (667) promising clones were selected and planted in the Row Test from April 2022 to March 2023. From these, 303 promising clones with good agronomic characteristics based on brix reading, average tiller per stool, average diameter, weight per stalk, and flowering observation were selected for the next stage of the Breeding Program, the Multiplication and Disease Screening Stage.
